

Frontend Developer Test (Middle Level)

Core Task

Project: Movie & TV Show Catalog Web App

API Source: [TMDB API](#)

Objective: Build a responsive and user-friendly web application that showcases data from TMDB API. The application should be engaging, performant, and demonstrate strong frontend development skills.

Duration

- **2 days** after receiving the assignment

Requirements

Functional Requirements

- Use at least **4** of the following TMDB API endpoints:
 - Top rated movies
 - Upcoming movies
 - Now playing movies
 - Popular movies
 - Popular TV shows
 - Top rated TV shows
 - On the air TV shows
 - Airing today TV shows
 - Popular people

Technology Stack

- **Framework:** Vue or React (your choice)

- **Styling:** Tailwind CSS, Bootstrap, or Material UI
- **Version Control:** Git (GitHub or GitLab)

Suggested Features

- Show loading state while fetching data
- Clean and engaging UI/UX (Netflix or Coursera inspired)
- Search functionality
- Rating or "Add to Watchlist" functionality
- Deploy to platforms like **Heroku**, **Vercel**, or **Netlify**
- Use semantic HTML (`<main>`, `<section>`, `<nav>`, etc.)
- Ensure all interactive elements are keyboard accessible
- Provide relevant `aria-*` attributes where needed
- Follow clean code practices:
 - Reusable and modular components
 - Descriptive variable and function naming
- Use **TypeScript** (preferred, not mandatory)
- Use **clear Git commit messages** (bonus for Conventional Commit format)

Documentation

- Include a `README.md` with:
 - Installation and usage instructions

Submission

- GitHub/GitLab repository link
- Live demo link (Heroku/Vercel/Netlify/etc.)

- Email to: **alifa@elemes.id**
